

Evian is France's bestselling still mineral water. Named after the town of Evian on Lake Geneva. The benefits of the water were first recognized in 1789, the year of the French Revolution, by the Marquis de Lessert who took the waters to ease his kidney stones. In 1815 thermal baths, known as Source Cachat after the family who originally owned the spring, were established and soon after a hotel followed. By 1890, and the arrival of rail, Evian was being widely distributed outside the local province and exports to the US followed in 1905. Evian is today one of the most recognized mineral waters in the world. Evian is a still low mineralized water, but having noted levels of Bicarbonate, Calcium and Magnesium make it a relatively 'hard' water.

Bicarbonates: 375mg/L

Calcium: 78mg/L

Chloride: 4.5mg/L

Fluoride: 0mg/L

Magnesium: 24mg/L

Nitrate: 1mg/L

Potassium: 1mg/L

Silica: 13.5mg/L

Sodium: 5g/L

Sulphates: 10mg/L

pH: 7.2mg/L
